1) **Uporabniki interneta** so tu osebe, ki so internet uporabljale v zadnjih 3 mesecih. V letu 2005 so bile v raziskovanje vključene tudi osebe, stare 10 – 15 let.
Internet users are individuals who used Internet in the last 3 months. In 2005 persons aged 10 to 15 were included in the survey.

METODOLOŠKA POJASNILA

Podatki v tej publikaciji so ocene, pridobljene z raziskovanjem uporabe informacijsko-komunikacijske tehnologije v gospodinjstvih. To raziskovanje je Statistični urad RS letos izvajal drugič, tudi tokrat po priporočilih Eurostata, evropskega statističnega urada, zato so rezultati mednarodno primerljivi. Enako raziskovanje namreč izvajajo tudi v vseh drugih državah članicah EU. Mednarodni podatki bodo dosegljivi konec leta 2005 na <http://epp.eurostat.ec.eu.int>, Themes Science and Technology, zavihek Data.

V letu 2005 smo v raziskovanje dodatno vključili osebe, stare od 10 do 15 let. V skladu z Eurostatovimi priporočili pa je bil posodobljen tudi vprašalnik, zlasti v delu o uporabi interneta pri posameznikih.

Osnova za vzorčni okvir je bil Centralni register prebivalstva. V vzorec je bilo izbranih 2 000 oseb, starih od 10 do 74 let.

Zbiranje podatkov je potekalo v aprilu in maju 2005. Stopnja odgovora je znašala 80,5 %.

Uporabniki interneta so tu osebe, ki so internet uporabljale v zadnjih 3 mesecih.

Podrobnejši rezultati raziskovanja bodo objavljeni decembra 2005 v publikaciji Statistične informacije.

Merila natančnosti po koeficientih variacije – ocene s koeficientom variacije:

- manjšim od 0,10 ($CV \leq 0,10$), so objavljene brez omejitev;
- od 0,10 do 0,15 ($0,10 < CV \leq 0,15$) so objavljene v enojnih oklepajih;
- od 0,15 do 0,30 ($0,15 < CV \leq 0,30$) so objavljene v dvojnih oklepajih;
- večjim od 0,30 ($CV > 0,30$), niso objavljene, nadomeščene so s piko.

KOMENTAR

V prvem četrtletju 2005 je imelo v Sloveniji dostop do interneta 48 % gospodinjstev (309 238). Med temi je bil delež gospodinjstev z otroki višji (64 %) od deleža gospodinjstev brez otrok (41 %). Ta podatek potrjuje, da je uporaba interneta najbolj razširjena pri mlajši populaciji.

V opazovanem obdobju je bilo v Sloveniji med osebami v starosti od 10 do 74 let 50 % rednih uporabnikov interneta (844 388). Ti so najpogosteje uporabljali e-pošto, iskali informacije o blagu in storitvah, igrali igrice in prenašali glasbo.

METHODOLOGICAL EXPLANATIONS

Data shown in this publication are estimates obtained with the survey Usage of the Information-Communication Technologies in the Households, which was conducted in the frame of the Eurostat guidelines for the second time by the Statistical Office of the Republic of Slovenia. Therefore, the data are internationally comparable. Harmonised surveys are conducted in all EU member states. The international data will be available by the end 2005 on <http://epp.eurostat.ec.eu.int>, Themes Science and Technology, Data.

In 2005 individuals aged 10 to 15 were also included. In accordance with Eurostat guidelines the questionnaire was updated, especially the part about the Internet usage by individuals.

The basis for the sampling frame was the Central Population Register. The sample included 2,000 individuals aged 10 to 74.

Data collection was implemented in April and May 2005. The response rate was 80.5%.

Internet users are persons who used the Internet in the last 3 months.

More detailed results will be published in December 2005 in the publication Rapid Reports.

The criteria by the coefficients of variation – estimates by the coefficients of variation:

- under 0.10 ($CV \leq 0.10$) are published without limitations;
- between 0.10 and 0.15 ($0.10 < CV \leq 0.15$) are published in single parentheses;
- between 0.15 and 0.30 ($0.15 < CV \leq 0.30$) are published in double parentheses;
- variation over 0.30 ($CV > 0.30$) are not published, but each one is substituted by a dot.

COMMENT

In the first quarter of 2005 48% of households in Slovenia (i.e. 309,238) had access to the Internet. Internet usage is the highest among the younger population which results also in the higher percentage of Internet access in the households with children (64%) and the lower percentage in the households without children (41%).

In the observed period 50% of individuals aged 10 to 74 were regular Internet users (844,388). The most frequent activities on the Internet were usage of the e-mail, searching for information about goods and services, playing games and downloading of music.
