št./No 3

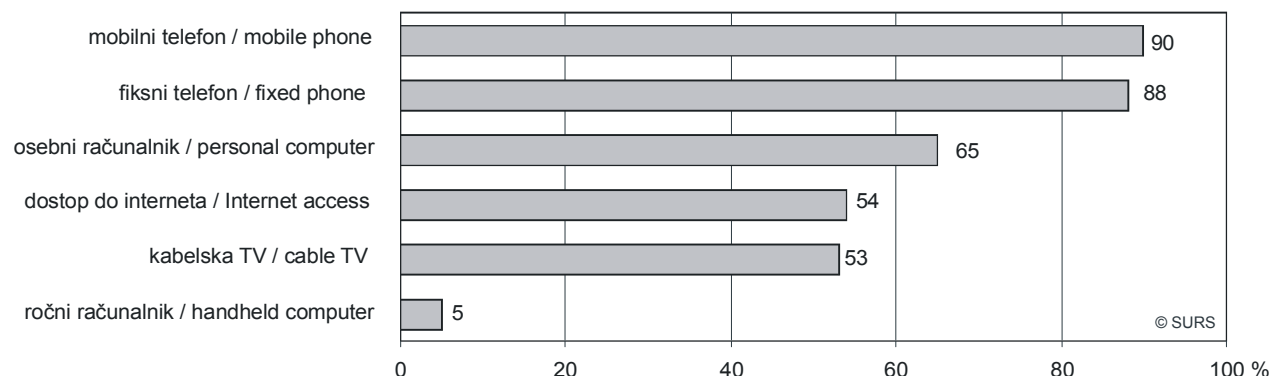

UPORABA INFORMACIJSKO-KOMUNIKACIJSKE TEHNOLOGIJE (IKT) V GOSPODINJSTVIH IN PO POSAMEZNIKIH, SLOVENIJA, 1. ČETRTLETJE 2006

USAGE OF INFORMATION-COMMUNICATION TECHNOLOGIES (ICT) IN HOUSEHOLDS AND BY INDIVIDUALS, SLOVENIA, 1ST QUARTER 2006

- ▶ V prvem četrtnetu 2006 je imelo dostop do interneta 54 % gospodinjstev; internet je uporabljalo več kot 900 000 oseb v starosti 10 do 74 let. 90 % gospodinjstev je imelo vsaj en mobilni telefon, osebni računalnik 65 %. V primerjavi z enakim obdobjem lani je bil zaznan upad deleža gospodinjstev s fiksnim telefonom z 90 % na 88 %.
- ▶ Internet postaja vedno hitrejši. Delež gospodinjstev, ki dostopajo do interneta prek širokopasovne povezave (npr. ADSL, VDSL, kabelski internet), je bil v prvem četrtnetu 2006 34 %.
- ▶ Glede na povprečje EU je bilo v tem obdobju v Sloveniji za 2 odstotni točki več gospodinjstev z internetom.
- ▶ In the first quarter 2006, 54% of the households had access to the Internet; more than 900,000 individuals aged 10 to 74 used the Internet. 90% of the households had at least one mobile phone and 65% had a personal computer. In comparison with the first quarter 2005, a drop in households with fixed phones was noticed from 90% to 88%.
- ▶ The Internet connection is getting faster. In the first quarter 2006 the percentage of the households who access the Internet via broadband connection (e.g. ADSL, VDSL, cable) was 34%.
- ▶ In the same period there were 2 percentage points more households with Internet access in Slovenia than the EU average.

KOMENTAR

Na opremljenost vpliva starostna struktura članov gospodinjstva

Eden najpomembnejših dejavnikov, ki vpliva na opremljenost gospodinjstev z IKT, je prisotnost otrok. Tako je imelo v prvem četrtletju 2006 99 % gospodinjstev z otroki mobilni telefon, med gospodinjstvi brez otrok je ta delež znašal 86 %. Podoben vpliv je za isto obdobje razviden tudi pri uporabi računalnika ter pri dostopu gospodinjstev do interneta.

Osebni računalnik je imelo 92 % gospodinjstev z otroki in 55 % gospodinjstev brez otrok. Velika razlika je pri dostopu do interneta; 75 % med gospodinjstvi z otroki in 47 % med gospodinjstvi brez otrok. Pri primerjavi z enakim obdobjem lani se je podvojil delež širokopasovne internetne povezave med gospodinjstvi z otroki: s 25 % na 50 %.

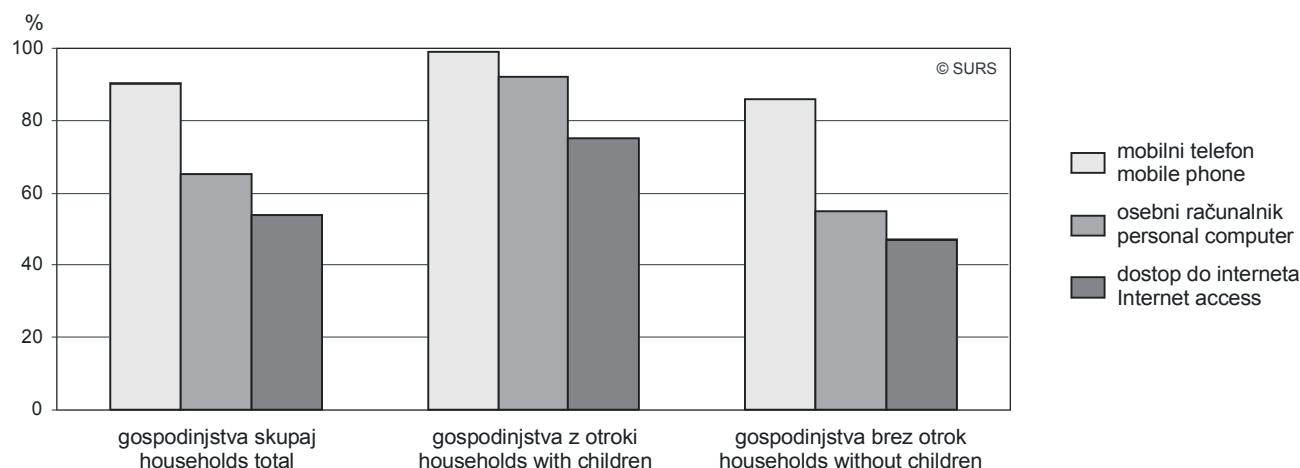

COMMENT

The equipment of households influenced by the age structure of household members

One of the most important factors that influence the equipment of households with ICT is the presence of children. In the first quarter of 2006, 99% of households with children had a mobile phone, whereas in households without children the percentage was 86%. Similar influences are notable in the same period for the usage of the computer and as regards access to the Internet.

92% of households with children had a personal computer; in households without children the percentage was 55%. There was a big difference in access to the Internet; 75% in households with children and 47% in households without children. In comparison with the same period last year the percentage of broadband Internet connection in households with children has doubled from 25% to 50%.

Slika 3: Opremljenost z IKT glede na tip gospodinjstva, Slovenija, 1. četrtletje 2006

Chart 3: ICT equipment by household type, Slovenia, 1st quarter 2006

Dostop do interneta je imelo 54 % gospodinjstev, kar je za 6 odstotnih točk več kot v enakem obdobju lani. Pri načinu dostopa do interneta v primerjavi z enakim obdobjem lanskega leta ni prišlo do večjih sprememb. 93 % gospodinjstev z internetom uporablja za dostop namizni računalnik. Povečal se je tudi delež dostopa prek prenosnega računalnika; z 18 % na 25 %.

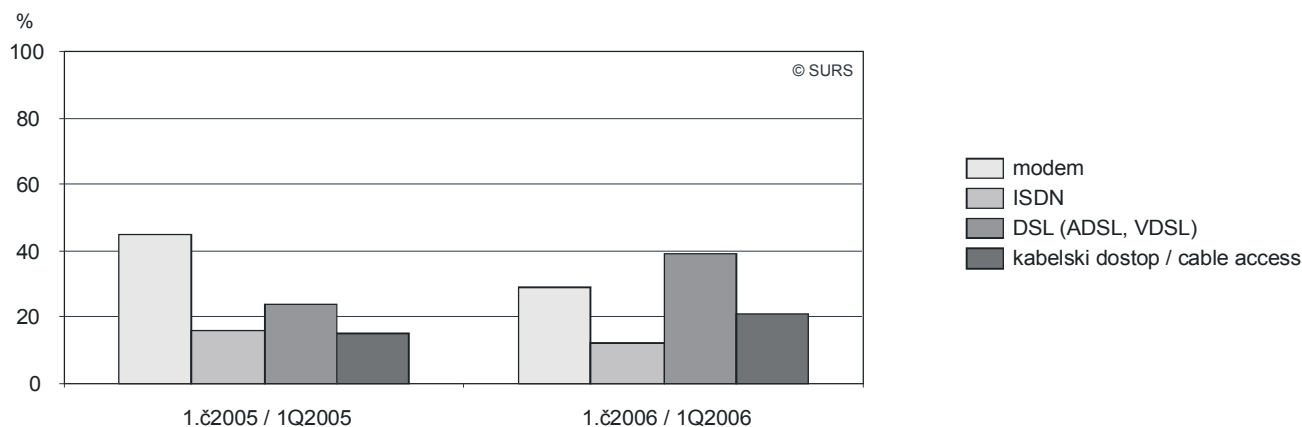

Do večjih sprememb je prišlo pri vrsti internetne povezave. Dostop do interneta postaja vedno hitrejši. Vzrok leži v večji konkurenci med ponudniki internetnega dostopa in opustitvi vezave ISDN in ADSL. Tako je bil med gospodinjstvi z internetom delež gospodinjstev s povezavo DSL 39 %; lansko leto v enakem obdobju je bil 24 %. Delež internetne povezave gospodinjstev prek ene izmed širokopasovnih povezav (ADSL, VDSL, dostop prek kablanske povezave) pa je znašal 62 %. Istočasno je bil zaznan upad deleža gospodinjstev z ozkopasovno povezavo. Prek običajne telefonske linije (modema) je do interneta dostopalo 29 % gospodinjstev z internetom (padec za 16 odstotnih točk v primerjavi z enakim obdobjem lani), prek linije ISDN pa 13 %, kjer se je delež zmanjšal za 3 odstotne točke. Kljub temu je ozkopasovna povezava še vedno najpogostejši način internetne povezave v redko naseljenih območjih, kjer širokopasovna internetna infrastruktura še ni tako razvita.

54% of households had access to the Internet, 6 percentage points more than in the same period last year. There was no big change in terms of Internet access in comparison with the same period last year. 93% of households with Internet connection use a desktop computer. The share of access via a portable computer has also grown from 18% to 25%.

Bigger changes occurred in the type of the Internet connection. Internet access is getting faster. The reason lies in greater competition between the Internet providers and in the fact that the ISDN and ADSL connections are not longer tied together. Thus the percentage of the Internet connection via DSL in households with Internet amounted to 39%; 24% in the same period last year. The share of the household's Internet connection via broadband (ADSL, VDSL, cable) was 62%. At the same time a drop was noticed in narrowband Internet connection. 29% of households accessed the Internet via standard telephone line (modem), a drop of 16 percentage points in comparison with the same period last year; and via ISDN 13%, where the share was reduced by 3 percentage points. In spite of that, the narrowband connection is still the most frequently used Internet connection in thinly populated areas, because the broadband Internet connection infrastructure has not yet been developed.

Slika 4: Vrste internetnih povezav med gospodinjstvi z dostopom do interneta, Slovenija, 1. četrtnje 2005 – 1. četrtnje 2006

Chart 4: Type of Internet connection among households with Internet access, Slovenia, 1st quarter 2005 – 1st quarter 2006

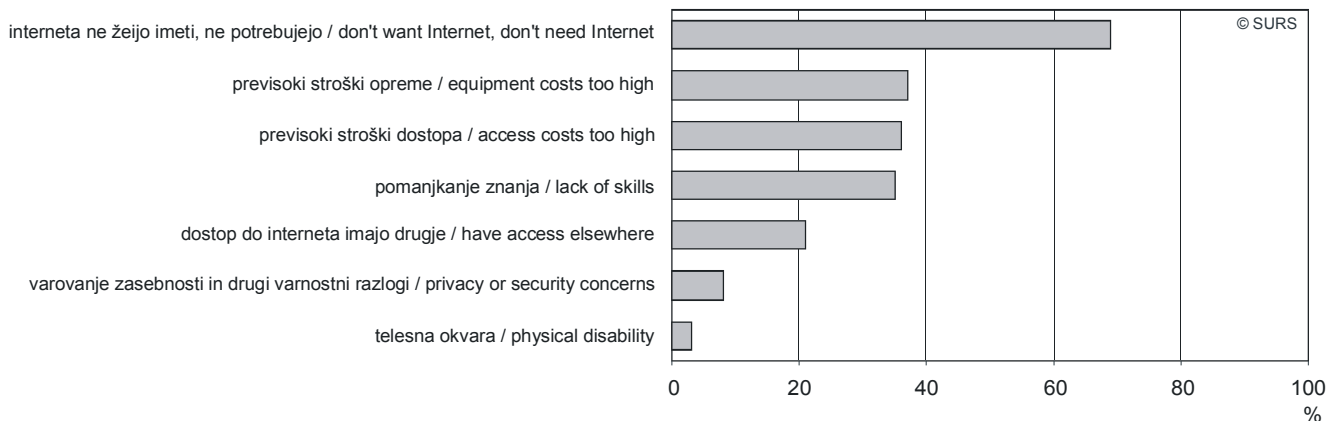

Delež gospodinjstev, ki nimajo dostopa do interneta, se je znižal iz 52 % na 46 %. Kot glavni vzrok, da nimajo dostopa do interneta, navajajo, da interneta ne potrebujejo, ne želijo (69 %). Pomanjkanje znanja postaja manj pomemben razlog, saj se je delež zmanjšal iz 43 % v enakem obdobju lanskega leta na 35 %. Prav tako se je znižala vrednost tudi dveh drugih razlogov: da so stroški opreme (37 %) ter stroški dostopa previsoki (36 %).

The share of households without Internet connection fell from 52% to 46%. As the main reason for not having Internet connection they declared that they don't need, don't want the Internet (69%). Lack of skills is becoming a less important reason, the share fell from 43% in the same period last year to 35%. The same goes for the reasons equipment cost too high (37%) and access costs too high (36%).

Slika 5: Razlogi, da gospodinjstvo nima dostopa do interneta, Slovenija, 1. četrtnje 2006

Chart 5: Reasons for not having the Internet at home, Slovenia, 1st quarter 2006

Uporaba osebnih računalnikov zmeroma narašča

Osebnih računalniki so postali nepogrešljivi del vsakodnevnega življenja, s katerimi se srečujemo v različnih situacijah. To potrjuje tudi dejstvo, da se je delež posameznikov, ki so že kdaj uporabljal računalnik, v primerjavi z enakim obdobjem lani povečal za 4 odstotne točke, in sicer na 69 % med posamezniki, stari od 10 do 74 let.

Enako se je povečal tudi delež rednih uporabnikov računalnika, to je pri posameznikih, ki so računalnik uporabljali v zadnjih 3 mesecih. V prvem četrtnju 2006 je računalnik uporabljalo 60 % posameznikov (1 009 985 posameznikov), starih od 10 do 74 let.

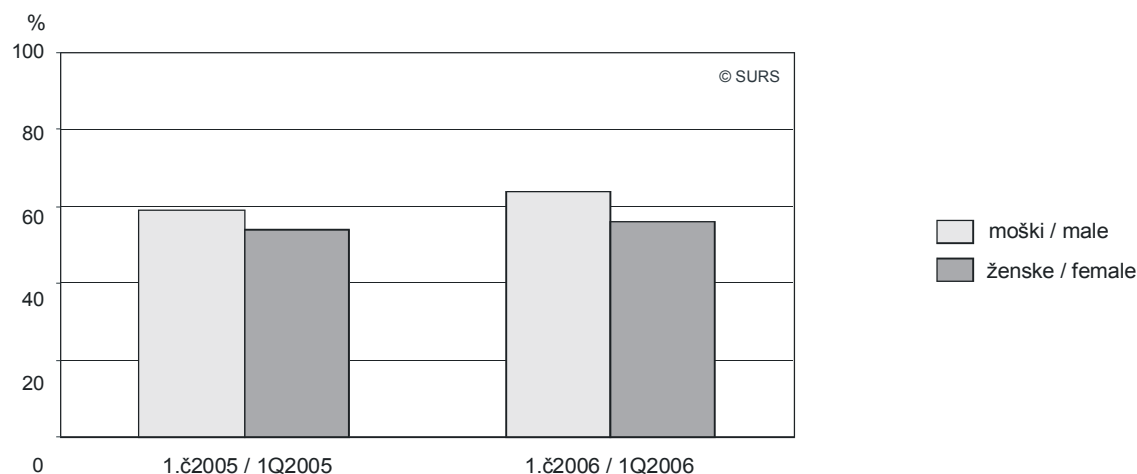

Kljub naraščanju števila uporabnikov računalnika še vedno obstajajo razlike med uporabniki glede na spol, starost, izobrazbo, status in gostoto naseljenosti območja, kjer posameznik prebiva.

The personal computer use is steadily rising

Personal computers have become an indispensable part of our lives and we encounter them in various situations. This is confirmed by the fact that the percentage of the individuals who have already used computers increased by 4 percentage points in comparison with the same period last year to 69% of individuals aged 10 to 74 years.

The share of regular users, i.e. people who have used computers within the last 3 months, also increased. In the first quarter of 2006, 60% (1,009,985 individuals) of the individuals aged 10 to 74 used computers.

But despite the fact that the number of computer users keeps growing, there are still distinctions between the users with regard to sex, age, education, status and the type of locality where the individual resides.

Slika 6: Uporabniki¹⁾ računalnika po spolu, Slovenija, 1. četrletje 2005 - 1. četrletje 2006Chart 6: Computer users¹⁾ by sex, Slovenia, 1st quarter 2005 - 1st quarter 2006

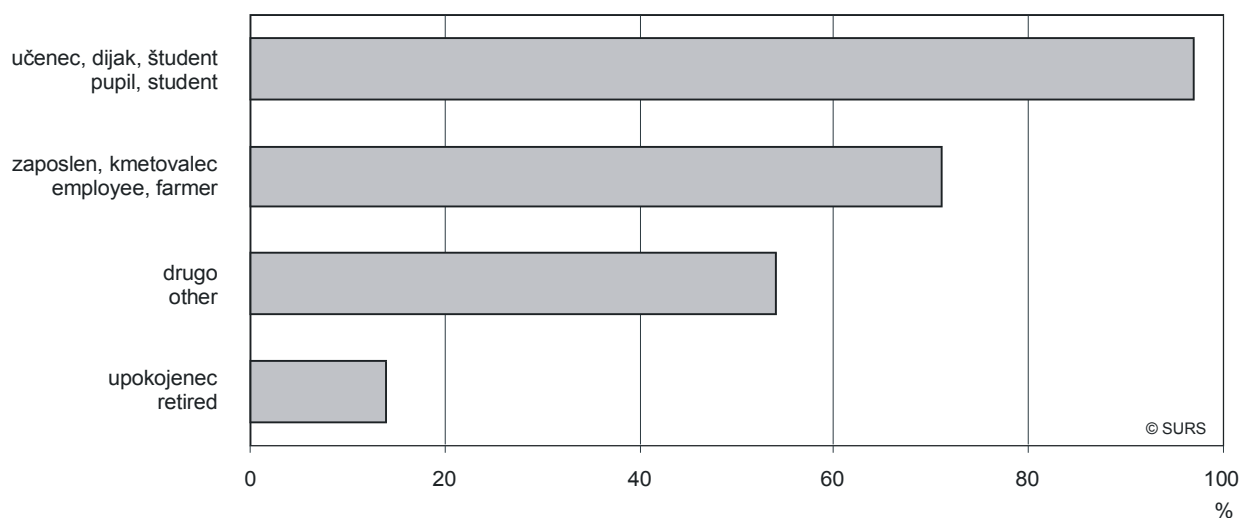

1) Posamezniki od 10 - 74 let, ki so uporabljali računalnik v 1. četrletju leta.
Individuals 10 to 74 who used the computer in the 1st quarter of the year.

Razkorak med uporabniki in uporabnicami računalnika se je v prvem četrletju 2006 povečal na 8 odstotnih točk. Razlika v uporabi se prav tako odraža v pogostosti uporabe računalnika ter glede na mesto uporabe računalnika. Po starosti je največ uporabnikov starih med 10 in 15 let (98 %) in najmanj uporabnikov starih med 65 in 74 let (7 %). Kljub temu je potrebno opozoriti, da se je delež uporabnikov v starosti od 55 do 64 let v primerjavi z enakim obdobjem lanskega leta povečal za 5 odstotnih točk (na 25 %).

Med deležem uporabe računalnikov po starosti in statusu obstaja korelacija. Največji del uporabnikov računalnika je med posamezniki, ki so po statusu učenci, dijaki, študentje (97 %).

The divide between male and female computer users increased in the first quarter of 2006 by 8 percentage points. The difference is also reflected in the frequency of use and with regard to the place where computers are used. According to age, the largest group of users are regular users aged between 10 and 15 (98%), whereas individuals aged 65 to 74 (7%) use the computer least of all. However, it should be noted that the share of computer users aged between 55 and 64 increased in comparison with the same period last year by 5 percentage points (25%).

There is a correlation between the share of the computer usage regarding age and status. The largest share of regular computer users (97%) represented pupils or students.

Slika 7: Uporabniki¹⁾ računalnika po statusu, Slovenija, 1. četrletje 2006Chart 7: Computer users¹⁾ by status, Slovenia, 1st quarter 2006

1) Posamezniki od 10 - 74 let, ki so uporabljali računalnik v 1. četrletju leta.
Individuals 10 to 74 who used the computer in the 1st quarter of the year.

Uporaba računalnika je povezana tudi s stopnjo izobrazbe in gostoto naseljenosti, kjer posameznik živi. Višja kot je izobrazba, večji je delež uporabe računalnika (med posamezniki z doseženo visoko izobrazbo je 92 % uporabnikov računalnika). Bolj kot je naselje posameznika gosto naseljeno, večja je uporaba računalnika. V gostejše naseljenih območjih znaša delež uporabe 74 %, v redko naseljenih območjih pa le 56 %.

Med uporabniki je glede na mesto uporabe največja uporaba računalnika doma (87 %), sledi uporaba na delovnem mestu (50 %). Med učenci, dijaki, študenti izstopa, poleg uporabe računalnika doma (98 %), tudi uporaba računalnika v šoli, na fakulteti (75 %).

Uporaba interneta presešla 50 %

Vzporedno z rastjo opremljenosti gospodinjstev z računalniki in uporabe računalnika s strani posameznikov narašča tudi uporaba interneta. V prvem četrtletju 2006 je bilo v Sloveniji 54 % (913 164 posameznikov) uporabnikov interneta, starih od 10 do 74 let. Uporabniki dostopajo do interneta najpogosteje od doma (81 %), nato z delovnega mesta (49 %) ter v šoli, na fakulteti (27 %).

Regular computer usage is also connected with the level of education and the type of locality where the individual lives. The higher the education, the higher the percentage of the computer usage (92% of computer users had higher education). And the more densely populated the area where the individual lives, the larger the share of computer usage. In densely populated areas the share of regular users was 74% in comparison to thinly populated areas with merely 56%.

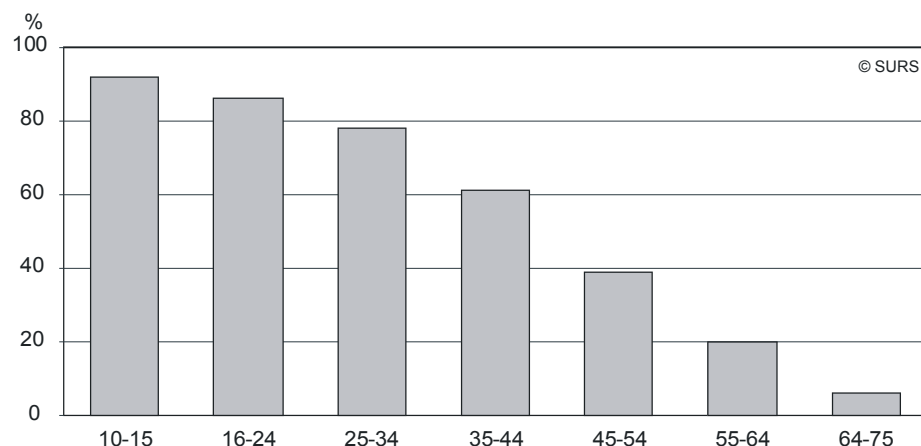

With regard to the place of computer usage, most people use computers at home (87%), followed by the workplace (50%). Among pupils, students - besides the usage of the computer at home (98%) - also the usage in school, faculty (75%) stands out.

Internet usage exceeded 50%

Parallel with the growth of the household's equipment with computers and the growth of the computer usage, the Internet usage also increased. In the first quarter of 2006 there were 54% (913,164 individuals) of regular Internet users aged 10 to 74 in Slovenia. The users accessed the Internet most often from home (81%), followed by the place of work (49%) and school and faculty (27%).

Slika 8: Uporabniki¹⁾ interneta po starosti, Slovenija, 1. četrtletje 2006

Chart 8: Internet users¹⁾ by age, Slovenia, 1st quarter 2006

1) Posamezniki od 10 do 74 let, ki so uporabljali internet v 1. četrtletju leta.
Individuals 10 to 74 who used the Internet in the 1st quarter of the year.

Največja rast je zaznana med posamezniki, ki uporabljajo internet vsak dan ali skoraj vsak dan in so stari med 16 do 24 let, saj se je delež povečal za 20 odstotnih točk na 67 %. V tej starostni skupini je tudi največ uporabnikov interneta za naslednje aktivnosti: pošiljanje e-pošte (76 %), telefoniranje prek interneta (11 %), druge vrste komuniciranja (49 %), iskanje informacij o blagu (69 %) itd.

Pri pregledu oblik komuniciranja prek interneta ugotavljamo, da je med posamezniki od 10 do 74 let v prvem četrtletju 2006 20 % teh posameznikov obiskalo ali tudi sodelovalo pri forumih, 17 % na klepetalnicah in le 5 % pri blogih. Največ posameznikov, ki so uporabljali forume, je bilo v starostni skupini od 16 do 24 let (45 %). Medtem so najbolj priljubljene klepetalnice med posamezniki od 10 do 15 let (50 %).

Posamezniki stari od 25 do 34 let pa najpogosteje iščejo informacije o zdravju (36 %), službi in uporabljajo internet za pošiljanje prošenj (20 %). Prav tako najpogosteje uporabljajo storitve e-bančništva (29 %), spletne strani javne uprave in nakupujejo ter prodajajo blago prek interneta, kar je pogojeno z dejstvom, da razpolagajo z večjo kupno močjo, kot mlajši posamezniki.

The largest growth was noted among individuals who use the Internet every day or almost every day and are between 16 and 24 years old; the share increased by 20 percentage points to 67%. In that age group there are also the largest users of the Internet for the following activities: sending e-mails (76%), telephoning via the Internet (11%), other kinds of communications (49%), seeking information's about goods (69%), etc.

When we take a look at the ways of communication via the Internet we notice that in the first quarter of 2006 20% of individuals aged 10 to 74 visited and participated in forums, 17% at chat-rooms and only 5% at blogs. Individuals aged 16 to 24 are the biggest users of forums (45%). On the other hand, chat-rooms are most popular among individuals aged 10 to 15 years (50%).

Individuals aged 25 to 34 most often seek health-related information (36%), information on job or they use the Internet for sending job applications (20%). Thus they use e-banking (29%), public authority's websites and they are buying and selling via the Internet, which is conditional on the fact that they have bigger income than younger individuals.

Seveda je tudi uporaba interneta odvisna od stopnje izobrazbe. Najvišja uporaba je pri posameznikih z visoko izobrazbo (90 %), kar je povezano z njihovimi potrebami po najnovejših informacijah. Uporaba je prav tako odvisna od statusa posameznika (učenci, dijaki 93 %) in vrste naseljenosti (69 % v gosto naseljenih območjih napram 49 % v redko naseljenih območjih).

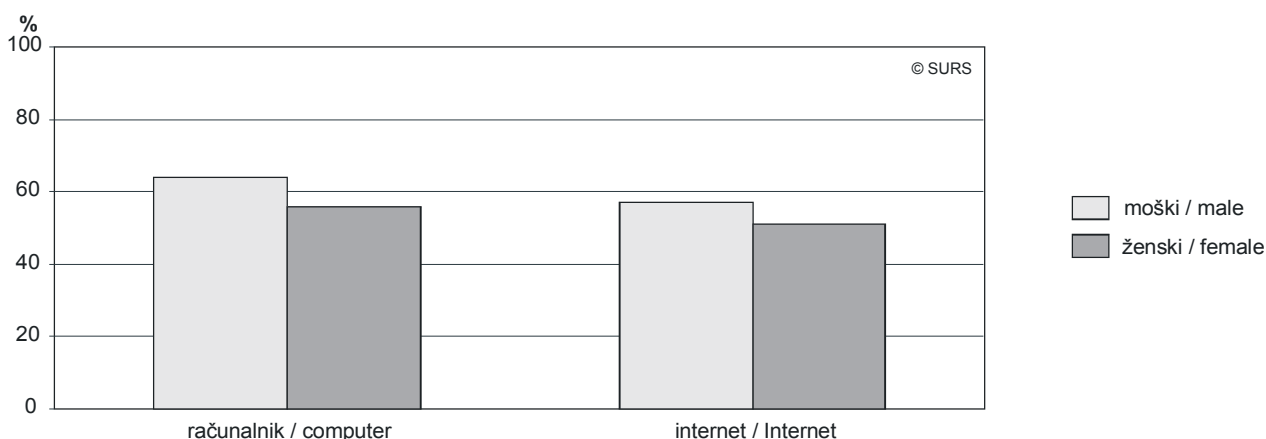

Tudi pri uporabi interneta zaznamo razkorak po spolu. Tako kot pri uporabi računalnika, tudi pri dostopu do interneta prevladujejo predstavniki moškega spola (57 %) pred predstavnicami, ki zaostajajo za 6 odstotnih točk. V primerjavi z enakim obdobjem lani se je ta razlika povečala (2005; 52 % moški in 48 % ženske).

The Internet usage certainly depends also on the education level of the user. The usage was the highest with highly educated individuals (90%), which is connected with their needs for newest information. The usage also depends on the status of the individual (pupil, student 93%) and the type of locality (69% in densely-populated areas in comparison with 49% in thinly-populated areas).

There is also the divide by sex in Internet usage. Similarly to computer usage, male users (57%) dominate over female users, who lagged behind by 6 percentage points. In comparison with the same period last year this difference increased (2005; 52% male users and 48% female users).

Slika 9: Uporabniki¹⁾ računalnika in interneta po spolu, Slovenija, 1. četrtnje 2006

Chart 9: Computer and Internet users¹⁾ by sex, Slovenia, 1st quarter 2006

1) Posamezniki od 10 do 74 let, ki so uporabljali računalnik / internet v 1. četrtnju leta.
Individuals 10 to 74 who used the computer / Internet in the 1st quarter of the year.

E-uprava

Državna uprava, pod katero štejemo vse državne inštitucije, od ministrstev, upravnih enot, občin, univerz, knjižnic itd., širi ponudbo svojih storitev na svojih spletnih straneh, od nujenja osnovnih informacij do opravljanja celovitih elektronskih storitev.

V prvem četrtnju 2006 je spletne strani e-uprave uporabljalo 30 % posameznikov od 10 do 74 let. Od tega jih je večina na internetu iskalo zgolj informacije, okrog polovica pa obrazce.

Glede na podrobnejša vprašanja o uporabi e-uprave med posamezniki od 16 do 74 let je v prvem četrtnju 2006 34 % posameznikov¹⁾ odgovorilo, da so z uporabo interneta že nadomestili ali pa bi bili pripravljeni nadomestiti sicer osebni kontakt z javno upravo. Uporaba spletnih strani e-uprave je, kot pri drugih aktivnostih, povezanih z IKT, odvisna od izobrazbe, statusa, vrste naseljenosti in starosti posameznikov. Mlajše osebe, ki jih najnovejša tehnologija spremlja od zgodnjih let, imajo manj zadržkov glede njene uporabe, več znanja in zaupanja v njeno uporabo.

Sorazmerno visok pa je še vedno delež posameznikov, ki ne uporabljajo storitve e-uprave (55 % vprašanih). Med njimi najbolj izstopajo pomisleki glede varovanja osebnih podatkov (41 %), pogrešanje osebnega stika (36 %) in nedosegljivost storitev na internetu (28 %).

1) Vprašanja o podrobnejši uporabi e-uprave smo zastavili le posameznikom od 16 do 74 let.
The questions about the usage of e-Government were directed only to individuals aged 16 to 74.

E-Government

The public administration – under which we include all government institutions, ministries, administrative units, municipalities, universities, libraries, etc. – is spreading the offer of its services on the websites, from offering basic information to the conclusion of entire service via the Internet.

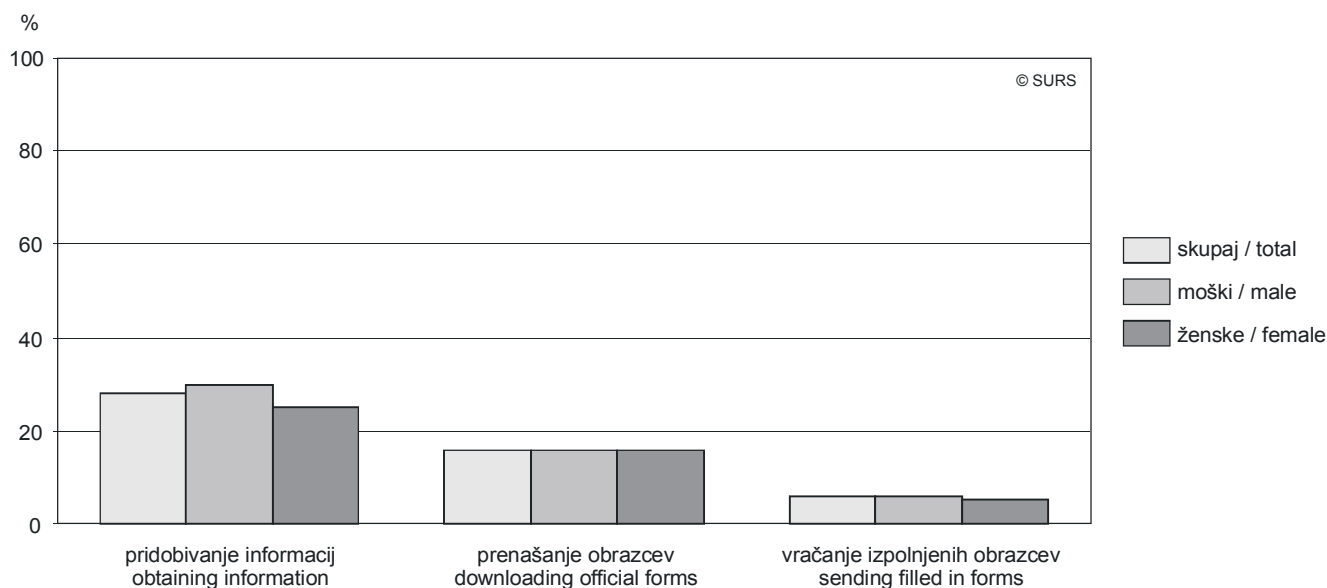

In the first quarter of 2006, 30% of individuals aged 10 to 74 years used the e-Government websites, the majority of whom searched for information and around half of them for official forms.

Regarding the usage of e-Government, 34% of individuals¹⁾ aged 16 to 74 answered that they had already done or would be prepared to replace their personal contact with public administration via the Internet. The usage of public websites, similarly to other ICT-related activities, depends upon education, status, type of locality and the age of the individual. Younger individuals who are familiar with the newest technologies from their early years have less hindrance regarding its use, greater knowledge and trust in its use.

Proportionally highly placed was still the share of individuals who would not be prepared to use the services of e-government (55% of the interviewed persons). The reasons that stood out the most are reservations regarding protection and security of personal data (41%), followed by the reasons of missing the personal contact (36%) and lacking immediate response (28%).

Slika 10: Uporabniki¹⁾ e-uprave po spolu in vrstah storitev, Slovenija, 1. četrletje 2006

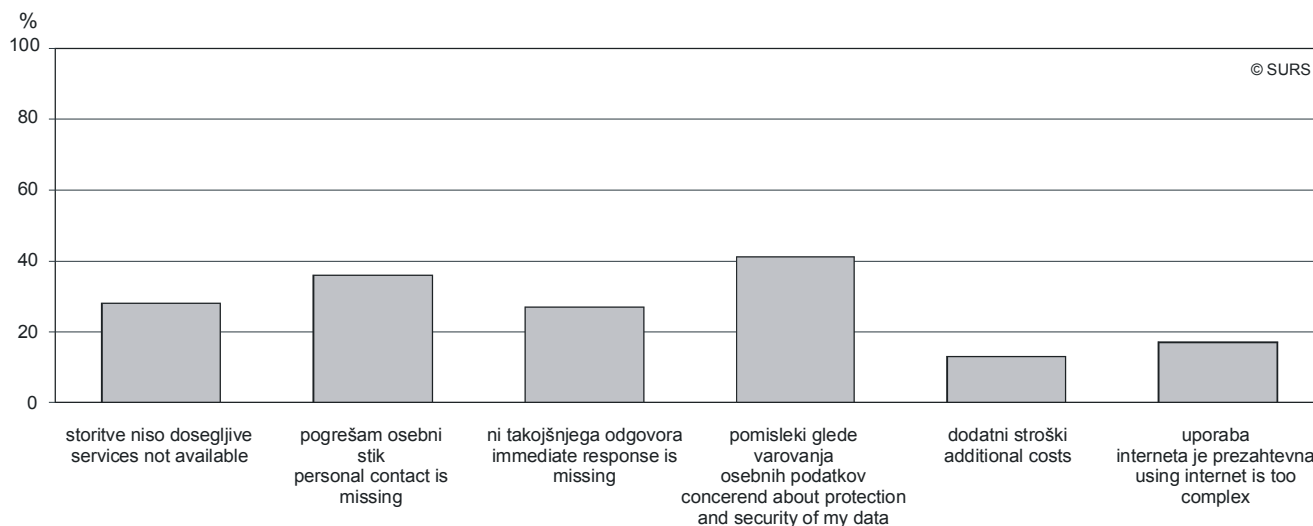

Chart 10: E-Government users¹⁾ by sex and and type of services, Slovenia, 1st quarter 2006

1) Posamezniki od 10 do 74 let, ki so uporabljali e-upravo v 1. četrletju leta.
Individuals 10 to 74 who used the e-Government in the 1st quarter of the year.

Slika 11: Vzroki, da posamezniki¹⁾ ne uporabljajo e-uprave, Slovenija, 1. četrletje 2006

Chart 11: Reasons for not using e-Government¹⁾, Slovenia, 1st quarter 2006

1) Posamezniki od 16 do 74 let. Delež glede na posameznike, ki ne uporabljajo e-uprave.
Individuals 16 to 74. Percentage of the individuals that don't use e-Government.

Med posamezniki, ki so že uporabili spletne strani e-uprave, najbolj izstopa storitev iskanja podatkov o knjigah in gradivu na spletnih straneh knjižnic (Cobiss program). Glede na starost je ta delež največji pri posameznikih od 16 do 24 let. Kakor pri uporabi računalnika in interneta, obstaja tudi pri e-upravi povezava pogostosti uporabe z izobrazbo, statusom in vrsto naseljenosti.

Among the individuals who used e-Government websites the search for data for books and material on the libraries websites (Cobiss program) stands out. As regards the age structure, the greatest share had the users aged 16 to 24 years. Similarly to the case of usage of computers and Internet, the same goes for e-government regarding the connection of the usage of the services with education, status and the type of locality.

Posamezniki od 16 do 74 let so v prvem četrtletju 2006 izrazili visok interes za spletno oddajo davčne napovedi (26 %). Po uradnih podatkih pa je v letu 2006 davčno napoved prek spleta oddalo okoli 36 000 posameznikov, torej približno 13 000 več kot leta 2005. Največji interes, in sicer 28 % posameznikov v starosti od 16 do 74 let, je izrazilo za spletno podaljšanje prometnega dovoljenja (omogoča portal e-uprave od maja 2006).

E-nakupovanje počasi narašča

V prvem četrtletju 2006 je 15 % posameznikov od 10 do 74 let povedalo, da so že kdaj koli opravili spletni nakup. Glede na enako obdobje lani se je ta delež povečal za 3 odstotne točke. Med spletnimi nakupi v zadnjih 12 mesecih so najpogostejše nakupovali knjige, časopise in računalniško programsko opremo (oboje 32 %), sledil je še nakup dobrin za gospodinjstvo (25 %) in nakup oblačil ter športne opreme (25 %).

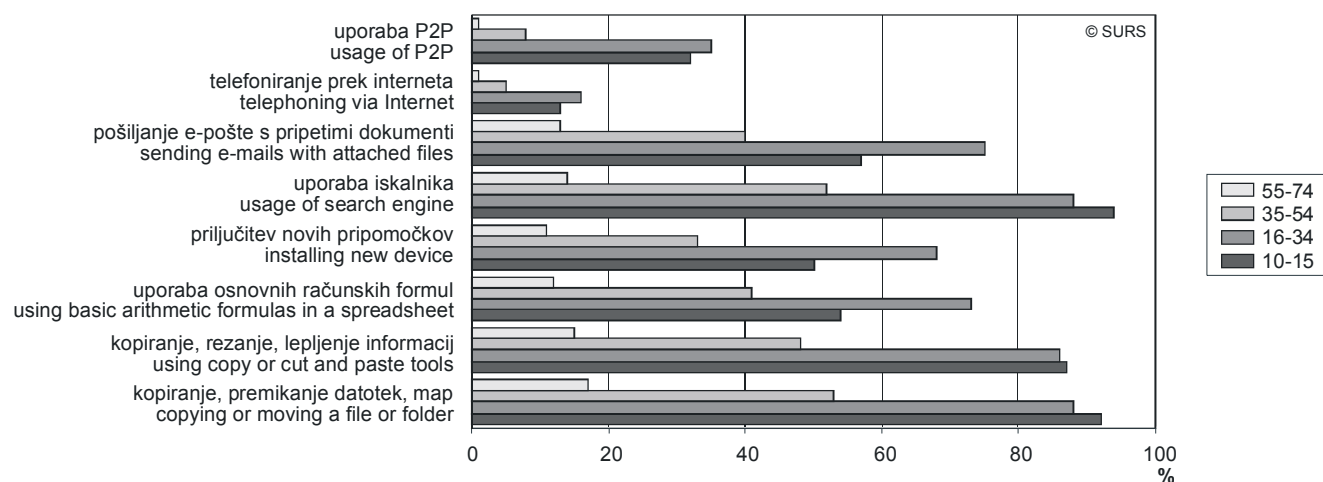

Če si podrobneje ogledamo razloge proti spletnemu nakupovanju, opazimo, da posamezniki radi vidijo blago, izdelek, ki ga kupujejo (38 %). Še vedno pa 20 % posameznikov ne zaupa v spletne nakupe. Hkrati pa je opaziti izboljšanje zaupanja v nakupovanje prek interneta, saj se je delež posameznikov s pomisleki glede varnosti in podajanja podatkov o kreditni kartici glede na enako obdobje lani znižal za 6 odstotnih točk.

Struktura e-veščin

Najpogostejši uporabniki računalnika ter interneta so osebe, stare od 10 do 34 let. To potrjuje tudi dejstvo, da so najbolj veščini v veščinah, ki jih potrebujejo za delo z računalnikom in internetom. Vendar ne smemo prezreti, da delež oseb, ki znajo delati z računalnikom, narašča tudi med starejšimi osebami. Tako se je uporaba osnovnih računskih formul v starostnih razredih 45 - 54 let in 55 - 64 let povečala za 2 odstotni točki, medtem ko se je uporaba iskalnika v enakih starostnih razredih povečala za 4 odstotne točke.

Slika 12: Struktura e-veščin po starosti, Slovenija, 1. četrtletje 2006

Chart 12: Structure of e-skills by age, Slovenia, 1st quarter 2006

Delež posameznikov, ki uporabljajo IKT tehnologijo, od računalnikov do interneta, zmeroma narašča. Za to je več razlogov. Z večanjem ponudbe internetnih ponudnikov, večjo konkurenco med ponudniki, z nižanjem stroškov nakupa računalnikov narašča možnost nakupa in dostopa do najnovejših tehnologij. S širitvijo infrastrukture pa se povečuje tudi delež širokopasovnega dostopa do interneta. Informacijsko-komunikacijsko tehnologijo najlažje osvojijo najmlajši, ki se s to tehnologijo srečujejo od svojega rojstva dalje. Iz tega razloga so najbolj pomemben dejavnik v opremljenosti gospodinjstev z IKT in njeni največji uporabniki.

Individuals aged from 16 to 74 years expressed in the first quarter of 2006 very high interest in delivering their tax declaration by Internet (26%). According to official data, around 36,000 individuals delivered their tax declaration in 2006 via the Internet; thus approximate some 13,000 more than in 2005. The biggest interest was expressed for an extension of the car registration via the Internet (possible via e-Government portal since May 2006) by 28% of the individuals aged 16 to 74 years.

Internet commerce slowly increases

In the first quarter of 2006, 15% of individuals aged 10 to 74 declared that they had already bought over the Internet. Regarding to the same period last year the percentage increased by 3 percentage points. Goods mostly bought via the Internet in the last 12 months were books, magazines and computer software (both 32%), followed by household goods (25%) and clothes (25%).

If we take a closer look at the reasons against buying via the Internet, we notice that individuals preferred to shop in person where they could see the product they were buying (38%). 20% of the individuals still do not trust in buying via the Internet. At the same time the trust for buying over the Internet improved; the share of individuals with hesitation regarding security and giving credit card details over the Internet decreased in comparison with the same period last year by 6 percentage points.

Structure of e-skills

The most frequent users of computers and the Internet are individuals aged 10 to 34 years. This fact is confirmed by the fact that they have the most skills needed for working with the computer and the Internet. However we must not forget that the share of individuals who can work with computers is increasing. Thus the share of applying the basic arithmetic formulas increased in the age classes 45-54 and 55-64 by 2 percentage points, while the usage of search Internet engines increased in the same age classes by 4 percentage points.

The share of individuals who use ICT technologies, from computers to Internet, is steadily increasing. There are many reasons for that. With an increased offer from various Internet providers, greater competition and with the lowering of costs for buying computers, the chances for buying and getting access to newest technologies increases. With the spread of the infrastructure the broadband access to the Internet increases. The youngest master the ICT easily because they are in contact with them from their birth on. Therefore they are the most important factor in the equipment of the households with ICT and are their largest users.

METODOLOŠKA POJASNILA

Namen statističnega raziskovanja

Podatki v tej publikaciji so ocene, pridobljene z letnim raziskovanjem o uporabi informacijsko-komunikacijske tehnologije (IKT) in s tem o računalniški oziroma informacijski pismenosti slovenskega prebivalstva (IKT-GOS). To pomeni, da smo z raziskovanjem ugotavljali, kako razširjena je uporaba računalnikov in drugih informacijsko-komunikacijskih naprav, koliko slovenske populacije dostopa do interneta in za katere namene ga uporablja. Pridobljeni podatki so pomemben vir za vodenje politike na področju informacijske družbe v Sloveniji in tudi v Evropski uniji.

Raziskovanje IKT-GOS smo na Statističnem uradu RS v letu 2006 izvajali tretjič, tudi tokrat po priporočilih Eurostata, evropskega statističnega urada, zato so rezultati mednarodno primerljivi. Enako raziskovanje namreč izvajajo tudi v vseh državah članicah EU in nekaterih bodočih članicah. Mednarodni podatki so dosegljivi na <http://epp.eurostat.ec.eu.int>, Themes Science and Technology, zavihek Data.

Enota opazovanja

Enota opazovanja sta bila posameznik v starosti od 10 do 74 let in njegovo gospodinjstvo.

Na vprašanja je odgovarjal izbran posameznik; če je bil ta odsoten, je lahko namesto njega odgovarjal drug član gospodinjstva, vendar v njegovem imenu.

Pri tem opozarjamo, da je bila vključitev posameznikov, mlajših od 16 let, na ravni EU prostovoljna in stvar posamezne države oz. interesa uporabnikov. Ker se na Statističnem uradu RS zavedamo visoke uporabe IKT med mlajšimi osebami in bi izključitev le-teh podcenjevala uporabo IKT v Sloveniji, smo v raziskovanje že v letu 2005 dodatno vključili posameznike od 10 do 15 let. Poleg tega je na strani uporabnikov interes, da se mladi vključijo v takšna raziskovanja, saj so navsezadnje prav slednji nosilci današnje informacijske družbe. Pri primerjavi podatkov te publikacije s podatki držav EU in s podatki predlanske publikacije, ko posamezniki, mlajši od 16 let še niso bili vključeni v raziskovanje, je potrebno upoštevati primerljive podatke, to je za posameznike, stare od 16 do 74 let. Za lažjo primerjavo so v publikaciji posebej objavljene tabele s podatki za osebe od 16 do 74 let.

Velikost vzorca

V vzorec je bilo vključenih 2 504 oseb, ki so bile v času zbiranja podatkov (to je od 01. aprila do 15. maja 2006) stare od 10 do 74 let.

Vzorčni okvir

Osnova za vzorčni okvir sta bila okvir popisnih okolišev in Centralni register prebivalstva (CRP).

Način zbiranja podatkov

Podatki so bili zbrani na terenu, in sicer z vprašalniki na papirju. Referenčno obdobje raziskovanja je bilo prvo četrtletje 2006.

Stopnje neodgovorov

Od začetne velikosti vzorca (2 504 enot) je bilo ustreznih 2 466 enot, v anketi pa je sodelovalo 1 771 oseb. To pomeni, da je stopnja odgovorov

METHODOLOGICAL EXPLANATIONS

Purpose of the statistical survey

Data shown in this publication are estimates obtained with the IKT-GOS survey, which is the annual survey about the usage of Information-Communication Technologies (ICT) and gives the information about computer and information literacy of the Slovenian population. The goal of the survey is to measure the usage of computers and other ICTs, how many people in Slovenia are Internet users and for what purposes they use the Internet. The data are an important source for conducting the policies in the field of information society in Slovenia and in the European Union.

The IKT-GOS survey was conducted in the frame of the Eurostat guidelines for the third time in 2006 by the Statistical Office of the Republic of Slovenia. Therefore, the data are internationally comparable. Harmonised surveys are conducted in all EU member states. The international data are available on <http://epp.eurostat.ec.eu.int>, Themes Science and Technology, Data.

Observation units

The observation units are persons aged 10 to 74 and their households.

The selected persons should answer for themselves, but if they were absent, some other household members could answer instead of the selected persons, but in the name of the selected persons.

The inclusion of the individuals, younger than 16, was optional at the EU level and therefore depend on each country whether they include those individuals or not. At SORS we are aware of high ICT usage between young people and the exclusion of them would underestimate the ICT usage in Slovenia. Therefore already in 2005 we additionally included the individuals aged 10 to 15 in the survey. Beside that there is an interest of our data users that young people are included in the survey. Above all they are the holders of our Information Society. When comparing the EU with Slovenian data or the Slovenian data for 2004 with 2005 and 2006 (in 2004 the individuals aged 10 to 15 not included) the data for the individuals aged 16 to 74 have to be used. Special tables for these individuals are published in that publication for easy comparison.

Sample size

The sample size was 2,504 persons who were at the time of data collection (01 April to 15 May 2006) aged 10 to 74 years.

Sampling frame

The bases for the sampling frame were the frame of numeration areas and the Central Population Register (CRP).

Methods of data collection

The data were collected in the field with a paper questionnaire. The reference period was the first quarter of the year.

(Non)response rate

In the sample size (2,504 units) there were 2,466 eligible units and 1,771 persons took part in the survey. That means that the response rate was

dosegla 71,8 %, stopnja ustreznosti pa 98,5 %. Stopnja neodgovorov je znašala 28,2 %, od tega stopnja zavračanja 14,8 %.

Uteževanje

Z uteževanjem smo izračunali nepristranske ocene in dosegli reprezentativnost vzorca za ciljno populacijo. Ker se podatki v anketi nanašajo na osebe in gospodinjstva, smo izračunali dve vrsti uteži:

- utež za osebe in
- utež za gospodinjstva.

Uteži, ki smo jih izračunali za osebe, smo razširili na populacijo oseb, starih od 10 do 74 let. 31. 12. 2005 je bilo v Sloveniji v tej starosti 1 690 251 prebivalcev.

Uteži, izračunane za gospodinjstva, smo razširili na populacijo gospodinjstev, ki so bila zajeta v popis leta 2002, in sicer gospodinjstev, v katerih je živela vsaj ena oseba, stara od 10 do 74 let. Takih gospodinjstev je bilo v Sloveniji ob omenjenem popisu 641 450.

Natančnost ocen

Pri ocenah deležev so omejitve pri objavi določene glede na ocenjene standardne napake, in sicer so ocene s standardno napako:

manjšo od 0,05 ($se \leq 0,05$) objavljene brez omejitve;

od 0,05 do 0,075 ($0,05 < se \leq 0,075$) objavljene v enojnih oklepajih;

od 0,075 do 0,15 ($0,075 < se \leq 0,15$) objavljene v dvojnih oklepajih;

večjo od 0,15 ($se > 0,15$) nenatančne, zato niso objavljene, nadomeščene so s piko.

Pri oceni števila enot z določeno lastnostjo so meje za standardne napake pripadajočih deležev pomnožene s številom vseh enot v obravnavani podskupini.

Pri ostalih cenilkah so omejitve pri objavi določene glede na ocenjeni koeficient variacije in sicer so ocene s koeficientom variacije:

manjšim od 0,10 ($CV \leq 0,10$) objavljene brez omejitve;

od 0,10 do 0,15 ($0,10 < CV \leq 0,15$) objavljene v enojnih oklepajih;

od 0,15 do 0,30 ($0,15 < CV \leq 0,30$) objavljene v dvojnih oklepajih;

večjim od 0,30 ($CV > 0,30$) nenatančne, zato niso objavljene, nadomeščene so s piko.

Uporabnik ocen (podatkov), izračunanih na osnovi anketnih podatkov, naj bi upošteval, da so ocene, ki so objavljene brez omejitve, dovolj zanesljive, tiste v oklepajih, pa manj.

Seštevki se zaradi zaokroževanja včasih ne ujemajo.

Objavljanje

Rezultati raziskovanja so objavljeni v publikaciji Statistične informacije. Informacijska družba. Uporaba informacijsko-komunikacijske tehnologije (IKT) v gospodinjstvih in po posameznikih.

Podatki za posameznike so objavljeni glede na posameznike, stare od 10 do 74 let in posebej glede na posameznike, stare od 16 do 74 let. Za

71.8% and the eligibility rate was 98.5%. The non-response rate was 28.2% and the refusal rate was 14.8%.

Weighting

With weighting we calculated unbiased estimates and achieved the representation of the sample for the whole population. The data in the survey refer to persons and households, therefore we calculated two weights:

- weight for persons and
- household weight.

We extended the calculated weights for persons to the whole population of the persons aged 10 to 74. On 31 December 2005 there were 1,690,251 people aged 10 to 74 in Slovenia.

We extended the calculated household weights to the population of the households as stated in the 2002 population census, i.e. households with at least one person aged 10 to 74. There were 641,450 such households in Slovenia.

Precision of estimates

For the estimations of proportions, the extent of the sampling error is quantified by standard error (SE). Estimates with standard error:

under 0.05 ($se \leq 0.05$) are published without limitations;

between 0.05 and 0.750 ($0.05 < se \leq 0.075$) are published in single parentheses;

between 0.075 and 0.15 ($0.075 < se \leq 0.15$) are published in double parentheses;

over 0.15 ($se > 0.15$) are unreliable and therefore not published, each one is substituted by a dot.

When estimating number of units with certain characteristics, limits for the standard errors for the corresponding proportions are multiplied with the number of all units in the analysed subgroup.

For other estimators (e.g. ratio estimators) the extent of the sampling error is quantified by coefficients of variation (CV). Estimates with standard error:

under 0.10 ($CV \leq 0.10$) are published without limitations;

between 0.10 and 0.15 ($0.10 < CV \leq 0.15$) are published in single parentheses;

between 0.15 and 0.30 ($0.15 < CV \leq 0.30$) are published in double parentheses;

over 0.30 ($CV > 0.30$) are unreliable and therefore not published, each one is substituted by a dot.

The users of the estimates (data), calculated on the basis of the survey data, should take into account that estimates published without limitations are sufficiently precise, while those in parentheses are less precise.

Totals are not always accurate due to rounding.

Publishing

The results of the survey are published in the publication Rapid Reports. Information Society. Usage of information-communication technologies (ICT) in households and by individuals.

Data for individuals are published separately for persons aged 10-74 and for persons aged 16-74. For the latter the data are also published by

slednje objavlja podatke tudi Eurostat za vse članice EU. Tako so za primerjanje podatkov s podatki Eurostata ustrezne tabele za posameznike, stare od 16 do 74 let.

Definicije in pojasnila

ADSL (angl. Asymmetric Digital Subscriber Line) - asimetrična digitalna naročniška linija je ena izmed xDSL tehnologij, ki omogoča asimetrični prenos podatkov. To pomeni, da je hitrost, s katero sprejemamo podatke z interneta, nekajkrat višja od hitrosti, s katero oddajamo podatke na internet. Tehnologija ADSL za prenos podatkov uporablja bakreno žico oz. parico.

Blog se najpogosteje opisuje kot spletni dnevnik. Izraz je angleški WEB + LOG = WEBLOG, BLOG. Blog je torej dnevnik, ki ga pišemo na internetu.

Brezžična povezava omogoča povezavo s spletom brez žice (radio-frekvenčna, infrardeča, mikrovalovna, satelitska povezava, wimax). Trenutno je najbolj pogosta brezžična povezava z internetom prek mobilnega telefona.

Dlančnik ali ročni računalnik (angl. Handheld computer) je računalnik z na dotik občutljivim zaslonom, pogosto barvnim. Večina dlančnikov nima tipkovnice, temveč za vnos podatkov poskrbijo na dotik občutljiv zaslon, virtualna tipkovnica na zaslonu ali razpoznavna črka, ki jih napišemo na določeno področje zaslona. Dlančnik omogoča poganjanje urejevalnika besedil, e-pošto, kalkulator, koledar, imenik, opomnik in vrsto iger.

Digitalna televizija omogoča prenos televizijskih in radijskih programov v digitalni obliki do naročnika. Tak prenos zagotavlja, da signali v neokrnjeni obliki pridejo do televizorja, s tem pa lahko gledalec uživa v enaki kvaliteti slike, kot jo ustvarjajo v televizijskih studiih.

xDSL (angl. Digital Subscriber Line) - digitalna naročniška linija zajema več različic, kot sta npr. ADSL, VDSL. Te tehnologije so zasnovane za povečanje pasovne širine običajnih bakrenih telefonskih žic, hitrost prenosa podatkov pa je odvisna od oddaljenosti doma ali podjetja od centrale podjetja, ki nudi storitev DSL. Linija DSL lahko prenaša podatke in glasovne signale, podatkovni del linije pa je nenehno povezan s centralo.

E-kavarna ali spletna kavarna (angl. internet café) je lokal, ki ob obisku nudi dostop do interneta in je ena izmed tako imenovanih javnih točk.

E-trgovanje je nakup ali prodaja izdelkov in storitev prek interneta.

GPRS (angl. General Packet Radio Service), znan tudi kot 2.5G, omogoča pošiljanje/prejemanje blokov podatkov z mobilnega telefona ali nanj. Omogoča stalno povezavo z internetom, uporabnikom pa se po navadi zaračuna cena glede na obseg prenesenih podatkov, in ne na čas povezave.

IKT (informacijsko-komunikacijska tehnologija) je programska in strojna oprema za komunikacijo s podatki (računalnik, fiksni, mobilni telefon, faks, internet ipd.).

Internet je svetovno omrežje povezanih računalnikov, ki se povezujejo po standardiziranem protokolu in omogočajo, da si uporabniki na različnih mestih izmenjujejo tekstualne in avdio-vizualne informacije.

ISDN (angl. Integrated Services Digital Network) - digitalno omrežje z integriranimi storitvami, ki omogoča hkraten prenos glasu, slike in podatkov do 128 Kbit/s.

Javna točka za dostop do interneta je najširša oznaka za katero koli informacijsko točko, ki omogoča dostop do interneta na javnem mestu. Take točke so na voljo v knjižnicah, mladinskih centrih, šolah, e-kavarnah in hotelih.

P2P (peer to peer) ali 'drug z drugim' je omrežje, kjer so podatki, informacije razdeljeni med večjim številom računalnikov in niso omejeni le

Eurostat za vse članice EU. Tako za primerjanje naših podatkov s podatki Eurostata mora biti upoštevan tudi dejavnik, da Eurostat za osebe starih od 16 do 74 let.

Definitions and explanations

ADSL (Asymmetric Digital Subscriber Line) is one of the xDSL technologies, which enables asymmetrical transmission of data. That means the speed of downloading is much faster than the speed of uploading. The ADSL technology is using a copper line to send data.

Blog is an Internet diary. The expression is English: WEB + LOG = WEBLOG, BLOG. Blog is a diary written on the Internet.

Wireless connection is a connection with web without wire (radio-frequency, infrared, satellite, microwave connection, wimax). One of the most frequent uses of wireless connection is with a mobile phone.

Handheld computer is a computer with a screen, usually colored, sensitive for touch. Most of them don't have a type device. Touch sensitive screen or virtual type device on a screen serve for data entering. Handheld computer is less efficient as personal computer in a same price class, but can enable text program, e-mail, post, calculator, calendar, menu, reminder, and a lot of games.

Digital television enables transmission of the television and radio programs in a digital format. The transmission enables high quality signals and the television viewer can enjoy the quality of the picture like they are having it in the television studios.

xDSL (Digital Subscriber Line) is a technology that includes different variations of the principle, such as e.g. ADSL, VDSL. These technologies are designed to increase bandwidth available over standard copper telephone wires. Individual connections depend on destination of home or business from the company central office that offers DSL service. A DSL line can carry both data and voice signals and the data part of the line is continuously connected.

Internet café is a public place that offers access to the Internet. It is one of the public Internet points.

E-commerce means buying or selling of goods and services over the Internet.

GPRS (General Packet Radio Service) known as 2.5 G technology, which makes it possible to send/receive blocks of data from/to mobile phone. GPRS provides an "always-on" connection to the Internet and users are normally charged according to the volume of data transmitted rather than the time spent connected.

ICT (Information and Communication Technology) is software and hardware for data communications (computer, fax, Internet, fixed, mobile phone).

Internet is a worldwide network of computers, communicating on the standard Internet protocol and providing users with exchange of textual and audio-visual information.

ISDN (Integrated Services Digital Network) is a digital network that enables transmission of voice, picture and data at the same time (128 Kb/s).

Public Internet point is any information point that enables Internet access in a public place. Public Internet points are placed in libraries, youth centres, schools, cyber cafes and hotels.

P2P (peer to peer) is a network where data, information are distributed between multiple number of computers and are not limited on one central

na posamezen strežnik. Uporablja se za izmenjavo datotek, filmov in glasbe prek različnih programov (eMule, Kazaa, DC++).

Požarni zid je kombinacija strojne in programske opreme, ki ščiti podatke in računalnik pred škodljivimi vplivi internetnega omrežja.

Set-top box ali **TV-komunikator** je posebna naprava, ki omogoča, da televizijski sprejemnik postane terminal za dostop do interneta. Konvergenca televizije in interneta omogoča spremljanje številnih domačih in tujih televizijskih programov ter uporabo interneta prek običajnega televizijskega zaslona.

Širokopasovne tehnologije (angl. Broadband) oz. **povezave** omogočajo hiter prenos podatkov oz. filmov, igrice, video konferenc prek internetnega omrežja (na primer: ADSL, kabelska povezava, UMTS, optična povezava, VDSL, najeti vodi).

UMTS (angl. Universal Mobile Telecommunication System) – univerzalni mobilni telekomunikacijski sistem je poznan tudi kot 3G tehnologija, ki je bil ustvarjen kot naslednik GSM-a. Omogoča prenos slik, videa, velikega obsega podatkov in dostop do interneta.

VDSL (angl. very-high-bit-rate DSL) je ena izmed DSL tehnologij, omogoča večje hitrosti prenosa podatkov kot ADSL, vendar pa je bolj omejena z oddaljenostjo doma ali podjetja od centrale podjetja, ki nudi dostop do interneta.

Mesečni neto dohodek na člana gospodinjstva je izračunan iz skupnega mesečnega dohodka gospodinjstva: plač, pokojnin, dohodkov iz dejavnosti, lastnine, kmetijstva, nadomestil za brezposelnost, štipendij, otroških dodatkov ipd. Gospodinjstva, prikazana v tabelah, so po višini dohodka razdeljena na kvartile. Najrevnejša gospodinjstva so uvrščena v 1. kvartil, najpremožnejša pa v 4. kvartil.

Naselja, v katerih živijo osebe, prikazane v tabelah, se po tipu naseljenosti delijo na:

- **gosto naseljene** (te zajemajo lokalne skupnosti, ki imajo posamezno več kot 500 prebivalcev/km² ali skupaj vsaj 50.000 prebivalcev);
- **srednje gosto naseljene** (te zajemajo lokalne skupnosti, ki ne spadajo med gosto naseljene in ki imajo posamezno več kot 100 prebivalcev/km² ali skupaj vsaj 50.000 prebivalcev);
- **redko naseljene** (te zajemajo lokalne skupnosti, ki po gostoti naseljenosti ne spadajo ne v prvo ne v drugo skupino lokalnih skupnosti).

Izobrazba oseb, prikazanih v tabelah, je lahko:

- **nižja izobrazba** (tako izobrazbo imajo osebe brez šolske izobrazbe, osebe z nepopolno osnovno izobrazbo in osebe z osnovno izobrazbo),
- **srednja izobrazba** (tako izobrazbo imajo osebe z nižjo ali srednjo poklicno izobrazbo, osebe s srednjo strokovno izobrazbo in osebe s srednjo splošno izobrazbo),
- **visoka izobrazba** (tako izobrazbo imajo osebe z višjo strokovno izobrazbo, osebe z višješolsko izobrazbo, osebe z visoko strokovno in univerzitetno izobrazbo ter osebe s specialistično povisokošolsko izobrazbo, z magisterijem ali doktoratom).

server. The network is used for sharing of files, movies and music using different programs (eMule, Kazaa, DC++).

Firewall is a combination of hardware and software that protects data and computers from harmful influences of Internet.

Set-top box or TV communicator is a device that enables a television set to become a user interface to the Internet. The convergence between television and Internet enables watching numerous domestic and foreign television programs and Internet usage through the usual television screen.

Broadband are technologies or connections which enable rapid transmission of data respectively films, games, video-conferences over a Internet network (for example: ADSL, cable connection, UMTS, optical connection, VDSL, leased lines).

UMTS (Universal Mobile Telecommunication System) is also known as 3G technology that was designed as a successor to GSM. It enables users to transmit images, video, high volume of data through wireless connection and access to the Internet.

VDSL (very-high-bit-rate DSL) is one of the DSL technologies. It enables fastest data transmission than ADSL, but more depends on destination of home or business from the company central office that offers DSL service.

Monthly net income per household member is calculated from the total monthly net income of the household: wages/salaries, pensions, income from activity, property, farming, unemployment benefits, scholarships, child benefit, etc. Regarding the amount of the household's income, the households are divided into quartiles. Households with the lowest incomes are included in the 1st quartile and households with the highest incomes are included in the 4th quartile.

Localities are divided by types into:

- **densely-populated area**, which includes the local areas, each of which has a density superior to 500 people per square kilometre, where the total population for the set is at least 50,000 people,
- **intermediate area**, which includes the local areas, not belonging to a densely-populated area, each of which has a density superior to 100 people per square kilometre, and with a total population for the set of at least 50,000 people,
- **thinly-populated area**, which includes the local areas belonging neither to a densely-populated nor to an intermediate area.

The education is divided into:

- **low education**, which includes persons without school education or incomplete basic educating and persons with primary education,
- **medium education**, which includes persons with lower or upper secondary vocational education, persons with upper secondary technical education and with upper secondary general education,
- **high education**, which includes persons with post-secondary vocational education, persons with professionally-oriented higher education, university education and persons with specialist post-graduate education, masters and doctoral studies.
